

Telephone Coils

For many years ADC division of Magnetic Controls Company has been a dependable source of transformers and filters to the telephone and telegraph industry. When Western Electric announced they would no longer supply these components to manufacturers we put our 24 years of experience to good use by designing and tooling on a series of "coils" which are electrically and physically interchangeable with similar components made by The Western Electric Company.

Listed on the reverse side are equivalent units which we have designed to date. Many of these are in stock. The unit you need may be designed for you if it is not listed.
